

**NATIONAL FLOORING**  
Floors For Industry

# Creative Flooring Solutions

For the leisure industry

Specialists in resin flooring...professionals in customer care.

# Typical installation areas...

- Nightclubs
- Pubs & bars
- Restaurants
- Commercial kitchens
- Food preparation areas
- Reception areas
- Changing facilities
- Sports stadiums
- Hotels
- Leisure facilities
- External areas
- Carparks

“We have used National Flooring for a number of years, they always work to high standards and in a professional manner. National Flooring are always efficient and work to tight deadlines to ensure we can achieve minimal disruption and impact on our guests.”

Gavin Riley  
Center Parcs

Our innovative and reliable approach to our flooring installations ensure that our clients get unique floor finishes with minimal disruption, leaving them with more time to play. Making an impact on your leisure environment can be crucial to the success of a venue within this highly competitive industry. Choosing an inviting interior design scheme will help to gain a competitive edge. A floor can play a vital role within the design scheme and a resin flooring solution can be used to create unique, striking finishes.

Working directly with clients, architects and specifiers we have completed a large number of projects for companies within the leisure sector, including pubs, clubs, sports stadia, hotels and leisure centres. The leisure industry can significantly benefit from the functional and aesthetic flexibility that our products and services provide. Our customers can make bold statements and create bespoke finishes and patterns that can be tailored to suit a specific design requirement.

Within this fast paced and demanding environment the window of opportunity to build, refurbish or refresh a venue is often limited. Specialising in the application of products that cure within just 2 hours of installation, we can quickly and cost effectively refurbish premises out of trading hours, ensuring that minimal revenue is lost.

## Comprehensive consultations

Choosing the correct floor finish is vital and a product's suitability can only be determined once a customer's requirements have been thoroughly evaluated. It is always necessary to understand our client's exact requirements, including time constraints, design, slip resistance and maintenance. Upon initial contact we discuss all requirements and combined with our rigorous site surveys we ensure the product we install is fit for purpose.

We have our own network of hardworking operatives allowing us to complete carefully monitored installations efficiently, with minimal disruption. By using dedicated personnel we can offer better quality assurance on our installations.

## Unique design

Within our range of products we have systems that offer extraordinary flexibility in terms of aesthetics. The designs can incorporate almost endless colour combinations and it is possible to incorporate patterns and shapes. From bold colours to glitters and pearlescent flakes it is possible to create truly stunning designs.

With our bespoke sample making service we provide you with the option to create your own unique, contemporary floor finishes.

## What Floor?

The leisure industry has traditionally used timber, vinyl, tiled or carpeted finishes; however these do not always offer the durability and flexibility of solutions that a resin floor can provide. Through years of experience working within this sector, National Flooring has gained a valuable understanding of the industry and its requirements and will only recommend the best solution following comprehensive consultations. We are aware that one of the biggest factors that restrict the leisure industry is time, and that the key flooring requirements include durability and design. As a result we specialise in the installation of Degafloor, quick curing, MMA resin flooring solutions. Benefits include:”

- 2-hour cure time – All systems are fully cured, both physically and chemically, 2 hours after installation.
- Exceptional bond to concrete, steel, tiles and marine ply.
- Unique chemical bond between layers – providing a truly monolithic finish.
- Seamless and impermeable – creating a hygienic finish.
- Bespoke, tailored decorative and slip resistant finishes.
- Outstanding durability and resistance to physical and chemical attack.
- Highly resistant to UV light, weathering and temperatures up to 80°C.
- Cures in temperatures down to -30°C.

## Flexibility/product range

The leisure industry incorporates a wide range of environments and each one has unique requirements. These unique requirements determine what floor system should be applied. Within our product range we have a solution to suit most environments and can tailor our systems to meet your specifications. We offer highly aesthetic floors for areas including pubs, clubs, sports centres and hotels. For areas where slip resistance is crucial such as kitchens, sports stadia and changing rooms we can provide excellent slip resistant finishes.

## Durability

Durability should be a top priority when choosing a floor finish. Finding a floor that can withstand the demanding environment of a leisure venue can be challenging. Many companies which use tiled or vinyl finishes, often have increasing maintenance costs due to the grouted joints and seams which can create weak spots. A resin floor produces a seamless finish and therefore reduces the risk of failure.

## Bonding technology

The MMA floors that we specialise in have a unique chemical bonding process. With a guaranteed bond to concrete, steel, tiles and marine ply we can offer a longer lasting, more durable solution. This unique process also enables us to refurbish our floors, with new colours and designs in many years to come without having to remove the existing screed. The risk of delamination is also greatly reduced.

## Minimal Disruption

Within the leisure environment the time to complete floor refurbishment projects is particularly limited due to demands for longer trading hours. Due to the unique quick curing characteristics of MMA resins, it is possible to complete installations during short closures. After just 2 hours of installation the area can be put back to full use. Our installations can be completed out of trading hours with the venue fully operational the following day.

### The source of our resins

The resins we use today are from the same suppliers we have used for the last 15 years. The Degafloor® product range was developed in conjunction with Evonik Industries, the world's leading supplier of MMA based reactive resins for the flooring industry. Evonik Industries manufacture almost 100% of performance resin critical components in Evonik's own facilities and have extensive research and development laboratories. Although they continually work to enhance their product range the systems are still based on the same well proven technologies as used many years ago.

Finding a quality floor means much more than just finding a floor that looks good. Clients often choose a floor from a small sample, without considering the actual quality of the components which make up the final finish. It is important to understand exactly where the resin and components are coming from to ensure that quality is guaranteed at every stage.

We have not changed our supplier and therefore have confidence in our product range. As a result we have proof that our floors really do last.
