

NATIONAL FLOORING
Floors For Industry

PROJECT REFERENCE

IKEA

:: Installation requirements

National Flooring has installed in excess of 1500 sq metres of the Degafloor FB system into various IKEA stores across the UK. Typical installation areas include kitchens, food preparation and kitchen store areas.

Installations to date have been IKEA Cardiff, Nottingham, Edmonton and Milton Keynes.

:: Why National Flooring?

IKEA had specific requirements due to previous failures of floor finishes. National Flooring assessed these requirements and provided a solution that matched IKEA's specification exactly.

Slip resistance was required due to the nature of the areas that were being refurbished. However, IKEA had experienced problems with water penetration and needed a durable system with integrated slip resistance. The seamless Degafloor FB system presented the perfect solution.

IKEA's UK Construction Manager, Steve Batley, added: "National Flooring worked closely with us to provide a flooring solution that exactly matched our specifications.

Other types of flooring have failed us in the past at other stores but Degafloor doesn't have the same weaknesses."

The National Flooring Company Ltd is an expert installer of resin flooring solutions for today's demanding industrial and commercial environments. We specialise in the installation of Degafloor MMA based resin systems and polyurethane systems. Additionally, we can also install all detailing and finishing items together with stainless steel drainage systems.
