

Project Reference

JL Priestley & Company Ltd Lincolnshire

:: Installation requirements

JL Priestley required a flooring solution that met with the fast track programme for its factory refurbishment. Durability was a key requirement as the floor had to withstand the pressure from a 70 tonne drier. Also being a food processing area slip resistance was vital.

:: Why National Flooring?

Based on specific requirements the Degaflow FB system was chosen and installed throughout the 1250sqm.

Speed and installation were essential to this project to ensure that the refurbishment met tight deadlines. The Degaflow FB system, which cures fully two hours after installation, ensured that minimal downtime was required.

Heavy pieces of machinery are required to produce up to 2,000 tonnes of dehydrated vegetables each year. To withstand these heavy loads an extremely durable floor was necessary. Each layer of the Degaflow system chemically bonds to each other, providing a completely monolithic finish that provides outstanding durability. The drier was assembled straight onto the floor soon after installation.

The Degaflow FB system also offers exceptional slip resistance even under wet conditions and was another major factor in the selection process.
