NATIONAL FLOORING
Floors For Industry

:: Installation requirements

The existing floor, which was a painted seal system, was not suitable in the packing or storage areas. The client, under pressure from suppliers, was required to find a solution that offered good hygiene, durability and slip resistance. A system suitable for cold store areas was also needed.

:: Why National Flooring?

The client approached National Flooring for advice on the most suitable solution for the 400sqm project. The existing floor needed attention before a solution could be achieved due to the condition of the concrete. National Flooring was required to repair all the cracks and joints, as well as making good around the drains. Before the Degaflor FB system could be installed a scrape coat was also needed to level the floor.

The Degaflor FB system, which provides a seamless, hygienic and durable floor finish, can be installed rapidly, minimising disruption. The system also offers good slip resistance, which is necessary in wet areas.

Specially formulated resins, developed to withstand colder environments, were installed in the chillers to provide a greater degree of flexibility and elasticity.

Fin Broadbent, at Lutton Farm comments " National Flooring completed a very efficient and professional installation. The new floor looks fantastic and works well under our production conditions."
