Nestlé Confectionery UK

York

:: Installation requirements

Nestlé Confectionery UK, the world's largest food manufacturer, was looking for a durable, slip resistant floor that could withstand heavy forklift traffic within two areas of the factory. Slip resistance was also a key requirement along with minimal disruption to this busy environment.

:: Why National Flooring

The Link corridor where forklift trucks are constantly in use required an extremely durable floor finish. Following discussions with Nestlé it became clear that their only option was the Degafloor QTA system. The system which is trowelled incorporates quartz aggregates throughout the mix offering intense durability. The same quartz aggregates are then broadcast on to the system to provide the necessary slip resistance. The area, which totalled 250sqm, now has a waterproof and seamless solution, which was imperative for this project.

Nestlé were also experiencing problems in the Mould wash area, a total of 225sqm. Upon inspection National Flooring were required to lay a Polymer Screed to level out the existing floor before installing the Degafloor QTA System. The seamless flooring system offers a hygienic solution for food manufacturing areas.

The Degafloor QTA System cures fully within 2 hours of installation ensuring that this project was completed with minimal disruption to Nestlé's production.
