Novus Leisure

Refurbishment Projects

:: Installation requirements

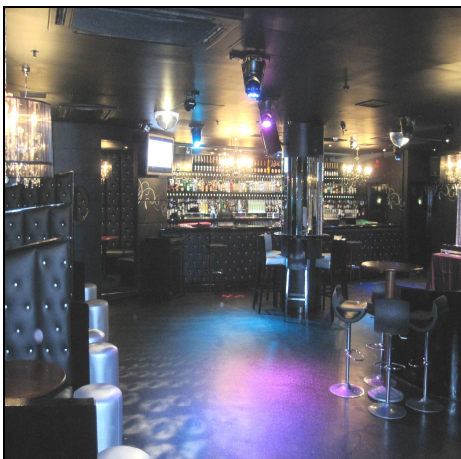

Novus Leisure was looking for a highly aesthetic floor finish that provided outstanding durability to suit their high footfall venues. The aesthetics needed to complement Novus Leisure's sophisticated and glamorous image used throughout their refurbishment programme.

:: Why National Flooring?

Having worked with National Flooring on previous Tiger Tiger venue refurbishments, Novus Leisure were already aware of National Flooring's ability to complete installations to high standards. The Degafloor QT System used for all the installations also proved to work exceptionally well within their venues, providing an aesthetic yet extremely durable solution.

The Degafloor QT system which is a mix of aggregates and resin is trowelled onto the floor to provide a long-lasting, seamless floor finish. The operator, which had previously used wooden, concrete and tiled finishes, found that their existing floors did not provide a suitable solution to match the range of requirements specified for the new refurbishment projects. The Degafloor QT system not only provides outstanding durability but also offers excellent flexibility in terms of aesthetics and allowed Novus Leisure to create a bespoke, highly decorative finish to match the internal décor. The system chosen also allows the operator to slightly modify the appearance slightly to suit each venue.

Through careful planning and co-operation with the main contractors on the refurbishment programmes, National Flooring was able to complete the installations to tight timescales due to the quick curing characteristics of the system. The Degafloor QT system, which cures fully within 2 hours, also ensures that installations can be completed in short shutdown periods to avoid disruption of the companies trading hours.
