NATIONAL FLOORING
Floors For Industry

:: Installation requirements

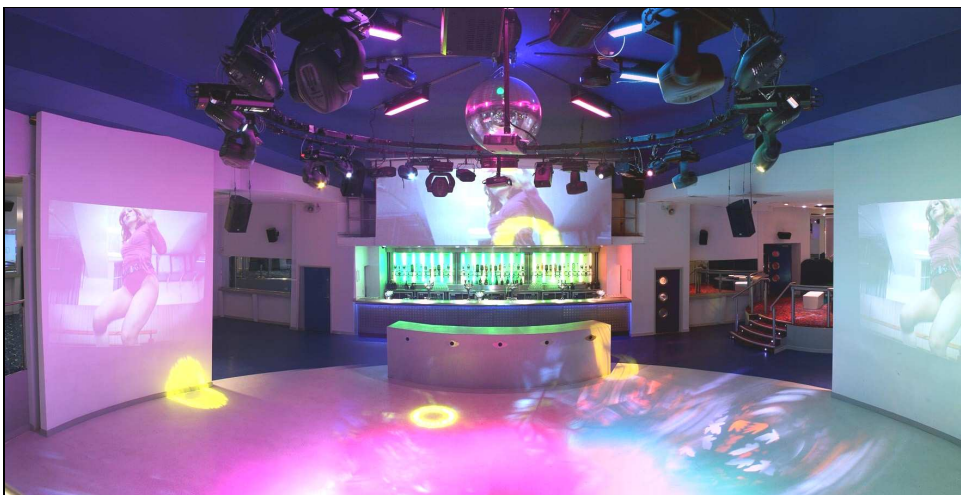

An attractive and stylish floor was required to match the existing white floor. With the previous resin floor finish wearing and revealing bare concrete durability was a key requirement for the high profile venue. The busy schedule of the club also meant that flooring work had to be completed efficiently with minimal disruption.

:: Why National Flooring?

Upon discussions with Play Nightclub it was agreed that the Degafloor Flake system chosen in white with pearlescent and silver flakes would provide the glamorous appearance that was required. To reduce slips and trips glass beads were added to the seal coat to offer enhanced slip resistance.

The Degafloor Flake system cures fully 2 hours after installation, providing a fast and efficient process, which did not disrupt the clubs day-to-day operations. The system, which was laid at a total of 5mm, provides outstanding durability and ensures that the floor will withstand the heavy footfall environment for many years to come.

Harry Holliday, Manager of the club comments, "The National Flooring team arrived early, maintained a high standard of cleanliness throughout their site time, worked amiably around our day staff, discussed and informed management through each stage of procedure, completed ahead of schedule after removing all traces of their presence from the building. In a day of jobs to a price, and job done, lets get out as quickly as possible tradesmen, it was cheery to have someone work with pride and pace, respect and leave no burdens, dirt, supplies or problems."
