The State Club

Gainsborough

:: Installation requirements

Wormald Design Consultants, interior designers on the project were given the task of finding a flooring solution that complemented the art deco surroundings of the building. The solution also had to provide outstanding durability and minimal disruption to the 21-week refurbishment programme.

:: Why National Flooring?

National Flooring was able to provide a fast fit solution with the Degafloor Flake system, which cures fully 2 hours after installation. The installation, which totalled over 500sqm, took only 5 days to complete. Working alongside Wormald Design Consultants and the main contractor on site, National Flooring were able to create a dramatic floor finish with minimal disruption.

The project included preparation of the sub floor and installation of marine ply for areas where the existing floor was damaged. Included in the design were brass trims laid to create striking beams throughout the floor. The system was chosen in red with pearlescent flakes to balance the surrounding décor.

Slip resistance is a key requirement in the leisure industry and aware of the potential hazards, National Flooring recommended and installed small glass beads into the seal coat.

Bob Wormald of Wormald Design Consultants commented, " I would be confident to recommend National Flooring as competent contractor, particularly in this field of art décor design. The product offers a long term solution and National Flooring proved to be very reliable and efficient, both of which are key requirements to the leisure industry."
