

Project Reference

Constellation Europe

Mereside

:: Installation requirements

A new bottling plant for Constellation Europe was being built and required a durable and slip resistant floor finish that could be installed rapidly to work with the fast track programme. A total of 25,000 m² of resin flooring was required combined with 900lm of coving.

:: Why National Flooring?

Having already used National Flooring years previously, Constellation Europe was confident in the products' ability to work under rigorous production conditions and was reliant on a professional and fast track installation.

A carefully supervised and prepared installation ensured that a minimum of 1200m² and up to 2,500m² of the Degaflor FB system could be installed in one day. The systems fast curing technology ensured that each area was fully cured 2 hours after installation.

The project, which is one of the largest installations completed by National Flooring, was finished on time and to the satisfaction of the client and other trades present all of whom were impressed with the dynamics of the team and speed of installation.

The Degaflor FB system provides outstanding durability, which is required under the heavy pieces of machinery and tanks that have been brought in since the installation. The slip resistance of the floor finish will also increase the safety of employees in these wet and highly dangerous areas.
