Spalding Farm Shop

Lincolnshire

:: Installation requirements

As part of an expansion plan, local family run company Spalding Farm Shop decided to extend their facilities by building a new café area. In order to complement this new area they decided to refurbish their existing farm shop which had a semi rough wood floor that was starting to crack. The clients were looking for a fully functional, hardwearing floor with a bespoke design finish to match the polished concrete effect that had been chosen for the new café area.

:: Why National Flooring?

South Lincolnshire Construction Ltd, the main contractors on the refurbishment project, contacted the National Flooring Company on the behalf of the farm shop asking for advice and any suggestions as to the correct type of flooring to suit their needs. Impressed by the timescale and variety of systems available in the Degafloor range a consultation was arranged at the farm shop to discuss the client's requirements for the different areas.

Following the survey it was agreed by all that the Degafloor QT system would be the perfect system for the farm shop. The system incorporates a mix of resin and aggregate, which is trowel applied at a nominal thickness of 4mm to provide an extremely durable finish. The client's requested a grey, industrial type floor finish to complement the polished concrete effect in the café area and by taking advantage of National Flooring's bespoke sample making service agreed on a customised colour finish.

As with all Degafloor products the QT system cures fully within just two hours of installation meaning the 111m2 area was back up and running with minimal disruption after just 2 days.

Jamie Butters of Spalding Farm Shop commented "National Flooring did a fantastic job in a very short space of time. They worked around us and our opening times, therefore there was minimal disruption. I would be happy to work with them again"
